

Digital Forensic Extract

DIGITAL FORENSIC DATA EXTRACT

Land Registrar Database Records

Field	Detail
Extract Reference	DFE/NGP/2026/0089
Case Reference	FIR KOT/2026/0089
Source System	Sub-Registrar Office, Kotwali — Land Records Database
Extraction Date	20/08/2026

Summary

This extract contains a forensic capture of database transaction logs from the Sub-Registrar Office's land records system, covering the period 01/03/2024 to 31/03/2024, relevant to the disputed land sale agreement purportedly registered on 03/03/2024.

Key Findings

1. Transaction log entry TXN-20240303-00871 records the document upload timestamp as 03/03/2024 14:22:07 IST, submitted from workstation ID SRO-KOT-WS04.
2. Metadata embedded in the uploaded PDF's document properties indicates a "Last Modified" timestamp of 03/03/2024 14:19:52 IST — five minutes prior to the recorded submission timestamp, consistent with local editing immediately before upload.
3. No corresponding biometric verification log entry exists for the complainant, Suresh Patil, for this transaction — the system's audit trail shows biometric capture was skipped for this specific submission, an anomaly relative to the office's standard workflow of the period.
4. Workstation SRO-KOT-WS04 login logs show the session was active under the credentials of a since-suspended data-entry operator, corroborating a chain-of-custody concern flagged separately by the investigating officer.

Conclusion

The extracted transaction and metadata logs support the hypothesis that the disputed sale agreement was uploaded without the complainant's verified presence, consistent with the forgery alleged in FIR KOT/2026/0089.
