

Forensic Report — Preliminary

FORENSIC SCIENCE LABORATORY REPORT

(Preliminary — Handwriting and Signature Analysis)

Field	Detail
Report No.	FSL/NGP/2026/0089-P1
Case Reference	FIR KOT/2026/0089
Date of Report	05/08/2026
Examiner	Forensic Document Examination Unit, Regional FSL, Nagpur

1. Exhibits Received

1. Exhibit A: Certified photocopy of the disputed land sale agreement dated 03/03/2024, bearing a signature purportedly of the complainant, Suresh Patil.
2. Exhibit B: Specimen signatures of Suresh Patil obtained from his Aadhaar card, PAN card, and voter identity card records.

2. Method of Examination

The disputed signature (Exhibit A) was compared against the specimen signatures (Exhibit B) using standard forensic document examination techniques, including stroke direction analysis, pen-lift pattern comparison, letter formation study, and pressure-pattern assessment under magnification and oblique lighting.

3. Preliminary Observations

3.1 The disputed signature shows noticeably different letter proportions in the initial “S” formation compared to the specimen signatures.

3.2 Pen-lift patterns in the disputed signature suggest slower, more deliberate strokes inconsistent with the fluid, habitual strokes observed across all three specimen signature sources.

3.3 A slight but measurable tremor is present in the disputed signature’s terminal stroke, not present in any specimen.

4. Preliminary Conclusion

Based on the above observations, there exist significant indications that the questioned signature on Exhibit A was NOT executed by the same hand that produced the specimen signatures. This

is a PRELIMINARY finding. Final comparative measurements and photomicrograph analysis are pending and will be furnished in a follow-up report.
