

Forensic Report — Final

FORENSIC SCIENCE LABORATORY REPORT

(Final — Handwriting and Signature Analysis)

Field	Detail
Report No.	FSL/NGP/2026/0089-F2
Case Reference	FIR KOT/2026/0089
Date of Report	22/08/2026
Examiner	Forensic Document Examination Unit, Regional FSL, Nagpur

1. Exhibits Received

1. Exhibit A: Original disputed land sale agreement dated 03/03/2024, bearing a signature purportedly of the complainant, Suresh Patil, produced by the Sub-Registrar Office, Kotwali.
2. Exhibit B: Specimen signatures of Suresh Patil (Aadhaar, PAN, voter ID) and four additional contemporaneous cheque-signature specimens obtained during investigation.
3. Exhibit C: Photomicrograph plates (14 nos.) of both questioned and specimen signatures, prepared under 40x magnification.

2. Method of Examination

Building on the preliminary comparison, the original disputed document (Exhibit A) was subjected to comparative stroke-width measurement, ridge-pattern impression analysis on the reverse of the page, ink chromatography (thin-layer) to date the ink deposition, and photomicrograph overlay comparison (Exhibit C) against seven specimen signatures (Exhibit B), an expanded set from the preliminary report's three.

3. Finalized Findings

3.1 Photomicrograph overlay comparison (Plates 1–14) confirms the initial S-formation divergence noted in the preliminary report is consistent and repeatable, not an artifact of a single specimen.

3.2 Ink chromatography places the disputed signature's ink deposition in a window consistent with document tampering after the stated execution date, rather than a fluid contemporaneous signing.

3.3 Ridge-pattern impression analysis on the document reverse reveals tracing-guide indentations beneath the questioned signature, a hallmark of freehand forgery via a traced template — absent from all specimen signature exemplars.

3.4 Comparative measurement across all seven specimens (up from three in the preliminary report) confirms the tremor and pen-lift anomalies identified earlier are statistically significant and not attributable to natural signature variation.

4. Final Conclusion

Based on the expanded exhibit set and photomicrograph/chromatography analysis, this laboratory concludes WITH REASONABLE CERTAINTY that the questioned signature on Exhibit A was NOT executed by Suresh Patil, and shows characteristics consistent with a traced forgery. This supersedes and finalizes the preliminary report dated 05/08/2026.
